

第3课时 方向向量与法向量

【纯答案册】题面不重印 印面号与正册同号同序

1. [答案] $2; 4/3$

2. [答案] (1) 1 或 2; (2) $4/3$

3. [答案] 方向向量如 $(1, -1)$ (答案不唯一); $k = -1$; $\theta = 135^\circ$

4. [答案] A、B、C 不共线; A、B、D 共线.

5. [答案] 真命题. 证明见详解.

6. [答案] (1) $y = -2x - 4$ (即 $2x + y + 4 = 0$); (2) 当 $u \neq 0$ 时为 $y - y_0 = (v/u)(x - x_0)$; 当 $u = 0$ 时为 $x = x_0$.

7. [答案] (1) $y = 3x$; (2) $u(x - x_0) + v(y - y_0) = 0$, 即 $ux + vy - ux_0 - vy_0 = 0$.

8. [答案] 一定. 理由见详解.

9. [答案] (1) $y = 2x - 11$; (2) $y = -(4/3)x + 5$ (即 $4x + 3y - 15 = 0$)

10. [答案] (1) $3x - 4y + 5 = 0$; (2) $3x + 4y - 5 = 0$

11. [答案] 证明见详解.

12. [答案] B

13. [答案] $2x - y - 5 = 0$

14. [答案] (1) $n_1 = (3, -1)$ (任一非零倍数均可) (2) $a = 2/3$

15. [答案] $m = 0$

16. [答案] $-\sqrt{3}/3$
