

[W] 探九前缀 (46.368mm minipage, 应 4 行同旧形)

+ 余段通栏

[详解] 过点 B, D 分别向 AC

作垂线, 垂足分别为 M, N ,

则可得 $AM = \frac{1}{2}, BM = \frac{\sqrt{3}}{2}$,

$CN = \frac{1}{2}, DN = \frac{\sqrt{3}}{2}$,

$MN = 1$. 由于 $\overrightarrow{BD} = \overrightarrow{BM} + \overrightarrow{MN} + \overrightarrow{ND}$, 所以
 $|\overrightarrow{BD}|^2 = (\overrightarrow{BM} + \overrightarrow{MN} + \overrightarrow{ND})^2 = |\overrightarrow{BM}|^2 + |\overrightarrow{MN}|^2 + |\overrightarrow{ND}|^2 +$
 $2(\overrightarrow{BM} \cdot \overrightarrow{MN} + \overrightarrow{MN} \cdot \overrightarrow{ND} + \overrightarrow{BM} \cdot \overrightarrow{ND}) = (\frac{\sqrt{3}}{2})^2 + 1^2 + (\frac{\sqrt{3}}{2})^2 +$
 $2 \times (0 + 0 + 0) = \frac{5}{2}$, 所以 $|\overrightarrow{BD}| = \frac{\sqrt{10}}{2}$. 故选:A.

[X] 探八前缀 (44mm minipage, 应 3 行同旧形) + 余段通栏

如图, 在大小为 45° 的二面

角 $AEFD$ 中, 四边形

$ABFE, CDEF$ 都是边长为 1

的正方形, 则 B, D 两点间的距离是

[Y] 对照: 探九全段 (46.368mm minipage, 旧形全窄)

[详解] 过点 B, D 分别向 AC

作垂线, 垂足分别为 M, N ,

则可得 $AM = \frac{1}{2}, BM = \frac{\sqrt{3}}{2}$,

$CN = \frac{1}{2}, DN = \frac{\sqrt{3}}{2}$,

$MN = 1$. 由于

$\overrightarrow{BD} = \overrightarrow{BM} + \overrightarrow{MN} + \overrightarrow{ND}$, 所以

$|\overrightarrow{BD}|^2 = (\overrightarrow{BM} + \overrightarrow{MN} + \overrightarrow{ND})^2$
 $= |\overrightarrow{BM}|^2 + |\overrightarrow{MN}|^2 + |\overrightarrow{ND}|^2 + 2(\overrightarrow{BM} \cdot$
 $\overrightarrow{MN} + \overrightarrow{MN} \cdot \overrightarrow{ND} + \overrightarrow{BM} \cdot \overrightarrow{ND})$
 $= (\frac{\sqrt{3}}{2})^2 + 1^2 + (\frac{\sqrt{3}}{2})^2 + 2 \times (0 +$
 $0 + 0) = \frac{5}{2}$, 所以 $|\overrightarrow{BD}| = \frac{\sqrt{10}}{2}$.

故选:A.
